

Profile

- 19+ years of IT experience in designing and delivering enterprise-scale technology solutions across insurance, healthcare, and supply chain domains.
- Currently working in the capacity of a Application Architect, leading cloud architecture, data transformation, and enterprise modernization initiatives.
- Experienced in designing cloud-native architecture, application modernization, and system integration using AWS services and distributed systems.
- Proven track record in driving mainframe-to-cloud transformation initiatives, enabling scalable data processing and modern application platforms.
- Strong expertise in AWS services (Lambda, Glue, S3, Step Functions), Python development, ETL/data engineering, and API-based integrations.
- Extensive experience working with both legacy mainframe systems (COBOL, DB2, JCL) and modern cloud technologies, enabling hybrid architecture solutions.
- Skilled in architecture design, technical leadership, and collaborating with cross-functional teams to deliver scalable, secure, and high-performance systems.
- Hands-on experience with DevOps practices, Infrastructure as Code (Terraform), and monitoring solutions to ensure operational excellence.
- Certified Scrum Master with strong experience in Agile methodologies and team leadership.
- ITIL certified professional with expertise in incident, problem, and change management aligned with enterprise standards.

Skill Set

- **Cloud & Architecture** : AWS (Lambda, Glue, S3, Step Functions, SNS), Cloud Architecture, Application Modernization, Distributed Systems Design
- **Programming & Scripting** : Python, REST API Integration, Event-driven Development
- **Data Engineering** : ETL Processing, Data Pipelines, Data Transformation, File Processing
- **DevOps & Infrastructure** : Terraform (Infrastructure as Code), Git (Version Control), CI/CD Concepts
- **Monitoring & Security** : AWS CloudWatch, IAM (Identity and Access Management), Encryption & Secure Configuration
- **Workflow Orchestration** : Event-Driven Architecture, Control-M, Control-D
- **Legacy / Mainframe Technologies** : COBOL, Assembler, JCL, CICS, VSAM, DB2, REXX, SyncSORT
- **Databases** : DB2, SQL Server, PostgreSQL and MongoDB (exposure)
- **Integration & Middleware** : IBM MQ, WebSphere
- **Tools** : JIRA, Confluence, Microsoft SQL Server Management Studio, Guidewire (PolicyCenter, BillingCenter, ClaimCenter)
- **Methodologies** : Agile (Scrum, Kanban) and DevOps
- **Business Domains** : Insurance (Primary), Healthcare, Supply Chain

- **AI & Emerging Technologies** : Exposure to Generative AI tools (IBM watsonx, GitHub Copilot, Rovo) supporting development productivity and automation.

Professional Experience

Jun 2010 – Present	Progressed through roles with increasing responsibility across application modernization, data architecture, and cloud transformation.	IBM Corporation
--------------------	--	-----------------

Project 1 : Data Management Team: Cloud Transformation & Enterprise Data Architecture

Client : AMICA Mutual Insurance

Role : Application Architect

Duration : Jul 2025 – Present

Responsibilities :

- Leads the design and implementation of cloud-native data and application architectures using AWS (Lambda, Glue, S3, Step Functions) within the Data Management team.
- Defines end-to-end architecture for data pipelines, including ingestion, transformation, storage, and integration across enterprise systems.
- Drives mainframe-to-cloud modernization initiatives by transforming legacy data processing systems into scalable cloud-based platforms.
- Designs and oversees ETL frameworks and data pipelines, enabling efficient data integration and real-time processing.
- Collaborates with stakeholders across the CIS department to align architecture solutions with business, regulatory, and operational requirements.
- Provides architectural governance and enforce best practices for scalability, performance, and reliability.
- Implements Infrastructure as Code (Terraform) and support DevOps practices for automated deployments.
- Defines and enforces security and access control mechanisms (IAM, encryption) to ensure data protection and compliance.
- Leads system integration using REST APIs and event-driven architecture to enable seamless connectivity between legacy and cloud applications.
- Monitors and optimizes system performance using CloudWatch to ensure high availability and operational excellence.
- Mentors team members, conduct design reviews, and provide technical leadership across cross-functional teams.

Project 2 : Financial Modernization (PaaS) – Legacy System Transformation

Client : AMICA Mutual Insurance

Role : Application Architect

Duration : Jul 2024 – Jun 2025

Responsibilities :

- Led modernization of legacy financial systems by transforming COBOL and Assembler logic into PL/SQL-based distributed frameworks, improving data consistency and compliance.

- Analyzed legacy applications and developed data mapping and transformation strategies, reducing conversion defects by 30%.
- Authored technical specifications, pseudocode, and design artifacts, accelerating development cycles by 20%.
- Acted as a liaison between business and technical teams, improving requirement accuracy and reducing rework by 15%.
- Supported Agile delivery through backlog grooming, sprint planning, and stakeholder coordination, improving team velocity by 10%.
- Contributed to application modernization strategy by aligning legacy systems with distributed and cloud-ready architectures.
- Collaborated with cross-functional teams to ensure seamless migration, testing, and integration of modernized applications.

Project 3 : Mainframe Application Decommission & Migration

Client : AMICA Mutual Insurance

Role : Application Architect

Duration : Aug 2023 – Jun 2024

Responsibilities :

- Directed phased retirement of critical mainframe applications, ensuring uninterrupted business operations.
- Designed and implemented data archival and migration strategies to support compliance and business continuity.
- Performed detailed dependency analysis and system mapping, reducing migration risk by 40%.
- Developed and executed phased decommissioning plans, achieving zero downtime during cutover.
- Designed archival frameworks exporting structured XML data to AWS S3, meeting retention requirements and reducing storage costs by 20%.
- Maintained batch processing continuity, ensuring 100% SLA compliance during transition phases.
- Authored detailed runbooks and fallback strategies, reducing incident response time by 50%.
- Collaborated with cross-functional teams to ensure smooth migration and integration of legacy systems.
- Contributed to early-stage cloud adoption by aligning legacy data archival and processing strategies with AWS-based storage solutions.

Project 4 : Program Management – IT Modernization & Data Initiatives

Client : AMICA Mutual Insurance

Role : Program Manager (Technology & Modernization)

Duration : Jul 2021 – Jul 2023

Responsibilities :

- Led multiple modernization initiatives across legacy systems, life insurance platforms, and data management functions, supporting enterprise transformation goals.
- Oversaw delivery of multiple programs involving application modernization, data governance, and system enhancements across cross-functional teams.
- Improved delivery performance metrics by 15% through adoption of Agile practices and

- governance frameworks.
- Defined and enforced compliance, audit readiness, and documentation standards, reducing audit findings to zero.
- Managed program-level planning, risk management, and stakeholder communication for large-scale IT initiatives.
- Led financial planning and governance for multi-million-dollar portfolio, ensuring alignment with business priorities and delivery commitments.
- Partnered with business and technical stakeholders to align modernization initiatives with enterprise architecture and long-term strategic objectives.
- Drove continuous improvement initiatives, enhancing operational efficiency and stakeholder satisfaction.

Project 5 : Application Support & Modernization – Core Policy Systems

Client : AMICA Mutual Insurance

Role : Project Manager (Application Modernization & Delivery)

Duration : Jul 2020 - Dec 2020

Responsibilities :

- Led modernization and maintenance of legacy mainframe applications supporting core policy processing systems.
- Managed end-to-end delivery of system enhancements and regulatory changes, including monthly rate revisions across multiple platforms.
- Improved turnaround time for business-critical changes by 30% through streamlined delivery processes and coordination.
- Facilitated Agile/Kanban-based execution, improving team velocity by 12% and ensuring consistent delivery.
- Conducted root cause analysis and implemented system optimizations, reducing batch job failures by 40%.
- Managed resource planning, delivery tracking, and governance to ensure alignment with business priorities and timelines.
- Ensured high availability and operational stability of production systems, achieving 99.9% SLA compliance.
- Collaborated with technical teams and stakeholders to align delivery activities with ongoing modernization initiatives.

Project 6 : PolicyCenter Data Conversion & Integration – Legacy Modernization

Client : AMICA Mutual Insurance

Role : Onsite Technical Team Lead

Duration : Jul 2016 - Dec 2019

Responsibilities :

- Led data conversion and integration initiatives for Guidewire PolicyCenter, ensuring accurate migration of legacy policy data to modern platforms.
- Directed legacy data extraction and transformation processes across multiple state rollouts, achieving zero critical defects during cutover.
- Designed and optimized batch processing workflows, reducing execution time by 35% and meeting strict migration timelines.
- Improved data conversion accuracy to 99.8%, significantly reducing post-migration remediation efforts.

- Coordinated cross-functional teams across development, testing, and business units, improving defect resolution time by 25%.
- Collaborated with stakeholders to define data migration strategies, integration approaches, and validation frameworks for large-scale system transitions.
- Ensured compliance with audit, regulatory, and data quality standards throughout data migration and system integration activities.
- Facilitated Agile delivery practices and supported end-to-end execution of modernization initiatives.

Project 7 : BillingCenter Data Conversion & Integration – Legacy Modernization

Client : AMICA Mutual Insurance

Role : Onsite Technical Team Lead

Duration : Aug 2014 - Jun 2016

Responsibilities :

- Led Guidewire BillingCenter data conversion initiatives across multiple states, ensuring seamless migration of legacy billing data.
- Designed and executed data extraction and transformation processes, achieving zero downtime during production cutovers.
- Optimized batch processing jobs, reducing execution time by 40% and improving system reliability.
- Developed reusable templates and documentation for conversion processes, improving efficiency for subsequent releases.

Project 8 : Product Procurement System (PPS), Inventory Management (INV) and Customer Maintenance and Common Modules (CCM)

Client : AmerisourceBergen Inc.

Role : Technical Team Lead

Duration : Jul 2010 - Jul 2014

Responsibilities :

- Delivered enhancements across procurement and inventory systems, improving operational efficiency by 20%.
- Reduced batch job failures by 35% through system monitoring and optimization.
- Led development and support of mainframe applications (COBOL, DB2, CICS) ensuring SLA compliance.
- Mentored team members and supported knowledge transfer, improving team productivity.

21 Aug 2006 – 11 Jun 2010 Technology Analyst

Infosys Technologies Ltd,
Pune, India

Project 1 : Aetna Strategic Desktop (ASD), Aetna Voice Advantage (AVA), Member Enrollment Application (MEA), Enterprise Provider Data Base (EPDB)

Client : Aetna Inc.

Roles : Technology Analyst, Senior System Engineer, Software Engineer

Duration : Aug 2006 – June 2010

Responsibilities :

- Worked on enterprise healthcare applications for Aetna, supporting provider data and enrollment systems.
- Delivered enhancements and system optimizations, improving performance and reducing turnaround time.
- Performed requirement analysis, design, development, and production support for mainframe-based applications.
- Automated processes and improved data quality through tooling and batch optimizations.
